

PAPER GEODE

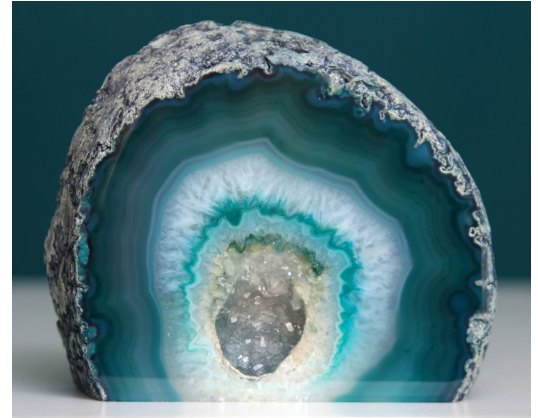

Video on Facebook - January 12 | 2:00pm
facebook.com/andersonlibrarysc

Materials Supplied

- Five colors of cardstock: gray, white, lighter tone, darker tone, and metallic
- Glue stick (optional)

Materials Needed

- Pencil
- Scissors
- Picture frame (4x6)

Trim

With this Take & Make kit, cardstock has been trimmed down to fit 4 x 6 picture frame.

Make Geode Layers

1. Arrange cardstock colors. Gray would be on top. Vary the colors as desired.
2. Starting with gray cardstock draw a large wavy half circle with points starting and ending at the same long side of cardstock.
3. Cut along drawn line.
4. Line up white cardstock underneath gray cardstock and make a slightly smaller semicircle, roughly following the wavy shape on the gray cardstock.
5. Cut along drawn line.
6. Continue process cutting smaller and smaller shapes with each layer, varying the light tone, dark tone, metallic, and white.
7. The final bottom layer should not be cut.

Glue (Optional)

8. Use glue stick to adhere the layers in order of largest cut to no cut.

Frame and Enjoy

9. Place into frame and display.
